Devouring Data, Revealing the Answers

Problem

- Movie review platforms contain thousands of reviews, making it difficult and time-consuming to manually determine whether sentiment is positive or negative.
- An automated way to analyze these large volumes of text is necessary.
- **Solution:**
Use sentiment analysis and machine learning to automatically classify movie reviews as positive or negative based on the review text.

Project Overview

Objective:

- Use sentiment analysis to classify IMDB movie reviews as positive or negative
- By analyzing the text of each review the model can identify the sentiment expressed by the users

Dataset:

- This dataset contains thousands of movie reviews collected from IMDB
- Each review is labeled with a sentiment (Positive or Negative)
- The 2 main columns in the dataset are Review and Sentiment

Conclusion

- Eliminates manual effort
- Actionable insights from reviews
- Improving customer experience
